ODD 2024
Week 2-LAB B
Practice Lab
**[CO: C270.1]**

Q1.

```cpp
#include <iostream>
#include <string>
using namespace std;
bool isValid(const string& s) {
    char stack[100];
    int top = -1;
    char opening[] = "({[";
    char closing[] = ")}]";
    for (int i = 0; i < s.length(); ++i) {
        char c = s[i];
        bool isOpening = false;
        for (int j = 0; j < 3; ++j) {
            if (c == opening[j]) {
                stack[++top] = c;
                isOpening = true;
                break;
            }
        }
        if (!isOpening) {
            bool isValid = false;
            for (int j = 0; j < 3; ++j) {
                if (c == closing[j]) {
                    if (top == -1 || stack[top] != opening[j]) {
                        return false;
                    }
                    top--;
                    isValid = true;
                    break;
                }
            }
            if (!isValid) {
                return false;
            }
        }
    }
}
```

```cpp
        return top==-1;
}
int main()
{
    string s1 = "()";
    string s2 = "()[]{}";
    string s3 = "((]";

    cout << boolalpha;
    cout << "Input: \"" << s1 << "\" - Output: " << isValid(s1) << endl;
    cout << "Input: \"" << s2 << "\" - Output: " << isValid(s2) << endl;
    cout << "Input: \"" << s3 << "\" - Output: " << isValid(s3) << endl;
    return 0;
}
```

```
Input: "()" - Output: true
Input: "()[]{}" - Output: true
Input: "((]" - Output: false
